RESEARCH NAME: Research of Public Opinion Center (CVVM)- "Our society 2018"
Research number: V1806
Language version: Czech
AVAILABILITY: Two months after data collection ends

RESEARCH INFORMATION
Subject of matter:
Election model in June 2018
Trust in constitutional institutions in June 2018
Trust in selected institutions in June 2018
Evaluation of activities of political parties and selected institutions - June 2018
Czech public opinion on unemployment - June 2018
Willingness to accept employment - June 2018
Citizens on the material living conditions of their households - June 2018
Citizens on the economic situation of the Czech Republic and on the living standard of their households - June 2018
Attitudes of the Czech public to their employment - June 2018
Czech public on gluten - free diet - June 2018
Consumption and food waste as a social problem - June 2018
Throwing away imperfect vegetables and fruits as one of the forms of food waste - June 2018
Self-ranking on the left-hand scale of political orientation - June 2018

WHEN DATA IS COLLECTED: 16. - 25. 6. 2018

RESEARCH ORGANIZATION:
The research was conducted by the CVVM research team as part of the research "Our Society 2018". The data were collected by the CVVM interviewer network.

Research parameters:
1078 persons representing the population of the Czech Republic older than 15 years were asked. Quotas used for respondent's selection were gender, age and education. The territorial representativeness of the sample is maintained by the construction of the interviewer network, where the checked characters are the size of the place of residence and regions.
Population parameters correspond to the structure of the population of the Czech Republic broken down by socio-demographic characteristics (sex, education, age) and by territory. Overall, we can say that the sample of respondents is representative because its composition corresponds to the whole population (with a tolerance of minimal deviations).
A total of 240 interviewers took part in the field data collection and rated the interviewing situation very well on average. Due to the good quality of the completed questionnaires, all interviews were included in the processing.
The sample shows a good level of representativity and has not been weighted.

Method of data collection:
Standardized interview. The data were collected by trained interviewers of the CVVM interviewing network.

Weighting:
File not weighed.
