2009-12-21

ISSP Study Description Form

Study title: ISSP 2009 on Social Inequality III

Fieldwork dates: 15.-29. 09. 2008

Principal investigators: PhDr. Natalie Simonová, prof. PhDr. Petr Matějů, Ph.D.

Sample type: Stratified probability sampling of election districts.
Probability sampling of households in selected district.

Fieldwork institute: SC&C spol. s r. o.

Fieldwork methods: Face to face interview

N. of respondents: 1205

Details about issued sample:

Please follow the standards laid down in AAPOR/WAPOR, Standard Definitions: http://www.aapor.org/uploads/standarddefs_4.pdf. The numbers in the parentheses are those used in Tables 2 and 3 of Standard Definitions.

1. Total number of starting or issued names/addresses (gross sample size) *	2000
2. Interviews (1.0)	1205

3. Eligible, Non-Interview
  A. Refusal/Break-off (2.10)
  B. Non-Contact (2.20)
  C. Other
  i. Language Problems (2.33)
  ii. Miscellaneous Other (2.31, 2.32, 2.35)
	
	521
	75
	
	3
	182

3. Unknown Eligibility, Non-Interview (3.0)	-
4. Not Eligible	14

* When new sample units are added during the field period via a new dwelling units list or other standard updating procedure, these additional issued units are added to the starting number of units to make up the total gross sample size. Also, when substitution is used, the total must include the originally drawn cases plus all substitute cases. See AAPOR/WAPOR Standard Definitions, pp. 9-10 for further clarification.

Language(s):   Czech

Weight present: Yes

Weighting procedure: Total weight is constructed from:
1) design weights based on proportion of household sizes
2) post-stratification weights based on region, education, age and sex,.
The weights were derived from data of the Czech Statistical.
Method: raking based on loglinear modelling.

Known systematic properties of sample: The probability of selection of the member of household depends on the size of the household. Due to response differences the basic socio-demographic characteristics - sex and education - are significantly different from the known population characteristics.

Deviations from ISSP questionnaire:
- In 2008 there were new value labels for CZ_PRTY (for details see czech08labels.doc).
- Specification of income variables:
CZ_RINC: Total average net income of respondent per month in

CZK. It includes incomes from main job or business, incomes from additional gainful activities or property, rents, social incomes as are unemployment benefits, maternal benefits, allowances, etc. It does not include child allowances and state compensatory benefits for children. Income asked in categories, i.e. midpoints of categories are coded.

CZ_INC: Total average net income of household per month in CZK. It includes incomes and rents of all members of household and all social benefits, allowances and complementary incomes. Income asked in categories, i.e. midpoints of categories are coded.
