

ISSP 2002, Czech Republic

Principal investigator: Klara Plecita, Institute of Sociology, Czech Academy of Sciences
Fieldwork agency: SC&C
Data collection method: Face-to face interview

Population Covered:

Sample designed to be representative of adults living in private, municipal and co-operative flats and houses, Lower age cut-off for the sample is the age of 18, no upper age-cut were used.

Sample procedure:

1. Stratified probability sampling of election districts
2. Probability sampling of households in selected district
3. Sampling of household members based on a Kish grid

Details about issued sample

Total number of <u>starting</u> or <u>issued</u> names/addresses	2298
addresses which could not be traced at all, selected respondents who could not be traced	18
addresses established as empty, demolished or containing no private dwellings	46
selected respondent too sick/incapacitated to participate	40
selected respondent away during survey period	105
selected respondent had inadequate understanding of language of survey	30
no contact at selected address	142
no contact with selected person	78
refusal at selected address	310
proxy refusal (on behalf of selected respondent)	36
personal refusal by selected respondent	143
other type of unproductive - <i>The respondent did not give us the authorization to personal data processing (Necessary according to the Personal Data Protection Act)</i>	61
full productive interview	1289
partial productive interview	
<hr/>	
<i>Response rate</i>	<i>57.7%</i>

Dates of fieldwork 16.09.2002-14.10.2002

Weighting

Total weight is constructed from:

- 1) Design weights based on proportion of household sizes
- 2) Post-stratification weights based on region, sex, education, age, economical activity, and size of the community.

The weights were derived from data of the Czech Statistical. Method: raking based on loglinear modeling.
