

STUDY TITLE:

Opinions on social changes - 1993, Czech Republic and Slovakia

Study number: 0087

Language: English

DEPOSITOR: Institute of Sociology, Prague.

AVAILABILITY: category A - standard conditions

DATA SET AND DOCUMENTATION CONDITION:

category 2 - standard

INFORMATION ON THE SURVEY:**Investigators:**

Pavel Machonin, Milan Tuček (SoÚ AVČR), Robert Roško (SoÚ SAV)

Subject of the survey:

This survey followed the survey "Social Stratification in Eastern Europe after 1989". The goal of this study was to complete informations about changes in social structure and about mobility with opinions and attitudes about transformation and social change.

In this area this study followed survey "Transformation of the Social Structure 1991" and also study on attitudes from 1984 ("TSS" attitude questionnaire, see in DA). The study was realized in Czech and Slovak Republics in the autumn 1993 in the scope of grant project.

Topics of this study:

Social and demographic constitution of households

Basic mobility data about respondents

Income of individuals and households, life standards, leisure time spending

Attitudes on transformation

Evaluation of income and life standard

Social equality and social justice

Value orientations and strategies

Attitudes on social order

Attitudes and orientations in politics

The view on social inequalities and self-placement in the society

Sampling procedure:

multilevel random choice. Community, locality, random walk with selection of the flat, random choice of respondent by Kisch's tables.

Fieldwork methods:

provided by:

Czech republic: UNIVERSITAS, consortium for applied sociology

Slovak republic: Cabinet for methodic and research of Slovakia Radio

Standardized individual interviews, standardized questionnaire. This phase of survey (data collection) was realized from october 1st to 30th 1993.

Target population:

Adult population in Czech and Slovak republics from 18 to 69 years of age.

Sample size:

Czech republic: 1902
Slovak republic: 1223

Weighing:

In the first step the data are weighted from random choice of household to random choice of individuals (due to size of household).

Both national samples was weigted separately to reach representativity in these perspectives: ratio men / women, five age cohorts and four educational groups and their combinations (variable in SPSS data file).

Availible files:

CZ file, SVK file, comon file in czech and english language versions (SPSS portable files *.por)
