

RESEARCH NAME: Research of Public Opinion Center (CVVM)- “Our society 2018”

Research number: V1805

Language version: Czech

AVAILABILITY: Two months after data collection ends

RESEARCH INFORMATION

Subject of research:

Election model in May 2018

Confidence in constitutional institutions in May 2018

Trust to party leaders - May 2018

Public attitudes towards gay rights - May 2018

Attitudes towards environmental protection and its financing - May 2018

Public opinion on abortion, euthanasia and death penalty - May 2018

Czech society and AIDS - May 2018

Environmental protection assessment - May 2018

Citizens on economic situation of the Czech Republic and living standards of their households - May 2018

Environmental assessment - May 2018

Attitudes and activities of Czech society towards the environment - May 2018

Czech public on global problems - May 2018

Public on energy policy, development of electricity consumption and possibilities of replacing conventional sources in its production - May 2018

Public opinion on the consumption and saving of energy, heat and water in their households - May 2018

Public opinion on nuclear energy - May 2018

WHEN DATA IS COLLECTED: 12. 5. 2018 – 21. 5. 2018

RESEARCH ORGANIZATION:

The research was conducted by the CVVM research team of the Institute of Sociology of the CAS, v.v.i., as part of the research “Our Society 2018”. The data were collected by the CVVM interviewer network.

Research parameters:

1008 persons representing the population of the Czech Republic older than 15 years were asked. Quotas used for respondent’s selection were gender, age and education. The territorial representativeness of the sample is maintained by the construction of the interviewer network, where the checked characters are the size of the place of residence and regions (former regions). Population parameters correspond to the structure of the population of the Czech Republic broken down by socio-demographic characteristics (sex, education, age) and by territory. Overall, we can say that the sample of respondents is representative because its composition corresponds to the basic population (with a tolerance of minimal deviations).

The field data collection was attended by a total of 227 interviewers who rated the interviewing situation very well on average. Due to the good quality of the completed questionnaires, all interviews were included in the processing.

The sample shows a good level of representativity and has not been weighted.

Method of data collection:

Standardized interview. The data were collected by trained interviewers of the CVVM interviewing network.

Weighting:

File not weighed.
