ISSP Study Description Form

Study title: ISSP - Pracovní orientace 2005 (ISSP - Work orientations 2005)

Fieldwork dates: 16/05/2005-06/06/2005

Principal investigators: Jiri Vecernik, Institute of Sociology AS CR

Sample type: Three stage stratified probability sampling:
 1) Stratified probability sampling of election districts
 2) Probability sampling of households in selected district
 3) Sampling of household members based on a Kish grid

Fieldwork institute: SC&C s s.r.o., Prague

Fieldwork methods: Face-to-face interview

Sample size: 1226

Response rates:

2580	A - Total issued (total sample)
32	B - Ineligible (address vacant, wrong ages,...)
2548	C - (= A - B) Total eligible (in scope sample)
1226	D - Total ISSP questionnaires received
1322	E - (= C - D; = F + G + H) Total non-response
625	F - Refusals (refusing to take part)
638	G - Non-contact (never contacted)
59	H - Other non-response

Language: Czech

Weighted: yes

Weighting procedure: Total weight is constructed from:
1) design weights based on proportion of household sizes,
2) post-stratification weights based on region, sex, education, age, economical activity, and size of the community.
The weights were derived from data of the Czech Statistical Office.
Method: raking based on loglinear modelling.

Known systematic properties of the sample:
- Under-represented groups are those, who are often out of theirs flat (students living in schools and colleges, conscripts). Inaccessible are persons who are not at their addresses at the time of the research (e.g., they are at longer journey out of their residence, in hospital, etc.), and persons who do not have any private address at time of the research (prisoners, homeless, persons living abroad, etc).
- People who work or worked in public opinion or market research and advertising were excluded.
- Due to response differences the basic socio-demographic characteristics - sex and education - are significantly different from the known population characteristics.

Deviations from ISSP questionnaire:	No differences in module questions.
	There are new labels for CZ_INC a CZ_RINC. (please see czech05labels.doc).
	Specification of income variables:
	• CZ_RINC: Total average net income of respondent per month in CZK. It includes incomes from main job or business, incomes from additional gainful activities or property, rents, social incomes as are unemployment benefits, maternal benefits, allowances, etc. It does not include child allowances and state compensatory benefits for children. Income asked in categories, i.e. midpoints of categories are coded.
	• CZ_INC: Total average net income of household per month in CZK. It includes incomes and rents of all members of household and all social benefits, allowances and complementary incomes. Income asked in categories, i.e. midpoints of categories are coded.
